WHO ARE WE

Founded in 2012, Arlogenix PTY embodies the spirit of innovation and excellence as a 100% black-owned company from the dynamic landscape of South Africa. Led by visionary and energetic leaders committed to progress, we are embarking on a journey fuelled by relentless research and development efforts.

At the heart of our company is our flagship product Online Transport, a ground-breaking solution that will revolutionise the mobility landscape. Online Transport is designed to streamline transport services with unrivalled efficiency and convenience. Online Transport epitomises our commitment to pioneering solutions that transcend boundaries.

In addition, we have forged strategic alliances with customers in key economic regions that put us at the forefront of the industry as a leading Mobility-as-a-Service provider. From database development and application development to business modelling and cyber security, we are relentlessly committed to innovation, using our South African heritage as a source of strength and inspiration.

As champions of progress, we are not just shaping the future, we are defining it, one ground-breaking solution at a time. Arlogenix is a testament to the ingenuity and resilience of the South African spirit and is poised to make an indelible mark on the global stage.

Penny Ngobeni

She is the voice of the company and works to improve the company's public image

OUR BUSINESS PROPOSITION

Arlogenix PTY is working with transportation providers across the country to digitise their core business and develop an interaction platform for commuters using its robust mobile, web and API application called Online Transport

Financially supporting transportation providers by purchasing tickets or travel points and reselling them through our various digital outlets

Integrating transportation providers with financial institutions and managing their day-to-day operations using the Transportation Engine, a transportation management tool

How to work with US

Provide us with your route map, schedules, pricing packages and business rules to digitize your core business, your sales documents and other records to determine the financial support we provide to your business.

The contract

We performs a risk assessment of your business and sends an offer to purchase bulk tickets or travel points at a discount. These tickets are resold on our digital platform and the revenue is offset against our investment in your business when a ticket is redeemed.

What are the advantages

Your business not only improves its cash flow, but also its quality of service and customer base as new and aspiring customers engage with your business through our various outlets

We connect your business with other businesses, appeal to new commuters, and develop your company's brand name.

How to contact US

You could contact us via our website
www.onlinetransport.co.za

Send an email to us at

Google Play Store

OUR SOLUTION

Commuters

Live Location

Can now see the location of a train, bus or cab when they want to book a ride. They can also send status updates to our service providers and other commuters on these channels.

Integrated Schedule

Can now view different schedule options from different service providers and take into account the different transfer options and the different route to a destination
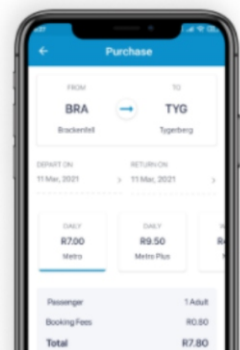

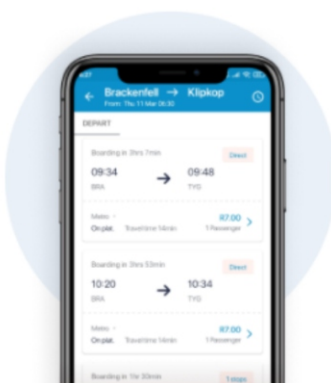

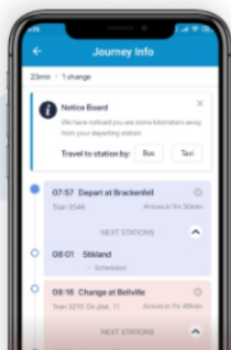

Online Payment

Can now pay for their fare from various service providers and modes of transportation using their credit card, debit card, EFT, cash or our One Wallet system.

Ticketing System

Can have all their tickets in one place. Service providers can also scan and validate tickets through the application.

Rewards & Incentives

Can get free rides with our rewards and incentive programs like GeoAds, refer-a-friend, campaigns and promotions.

OUR SOLUTION

Transport Provider

Schedule Managment

Upload and edit timetables. With the power of AI, we collect real-time location and time information and create a dynamic timetable to regularly improve your schedule.

Ticket Managemt

Setting up travel rules, fair use policies, price packages, transferring, refunding, scanning and validating tickets can be performed with the ticket management system.
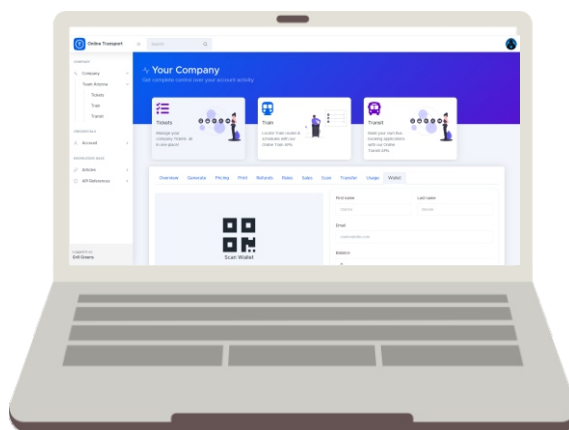

Commuter Management

Develop a dedicated solution for commuters, get better analytical insights into commuter behavior and their interaction with your business, improve user experience for commuters

Reporting System

Create reports based on business transactions and our AI algorithm. Forecasts and projections are also possible. With a dynamic report builder, you can create any type of report.

Feedback System

Notify commuters of delays, cancellations, arrivals, or departures for any event that may affect their trip. Also get feedback from commuters about their experience with your service.

OUR SOLUTION

Developers

Open Transport API

Through our APIs, we collect traffic data for schedules, route plans, fare packages, special offers, extensions, and more, and make this data available to developers to create more Roboust systems.

Integration Channels

With instructions on how to integrate our API with various institutions from different industries. This will allow your company to interact seamlessly with other companies

API Key Management

The API key management model, allows users to control access to various data sets and applications and determine from where they are accessed.
They can also manage their subscription plans.

Standard Documents

We use the standard JSON format and provide SDKs with well-documented endpoints and results that make it easy for developers to interact with our APIs.
